How to Make:

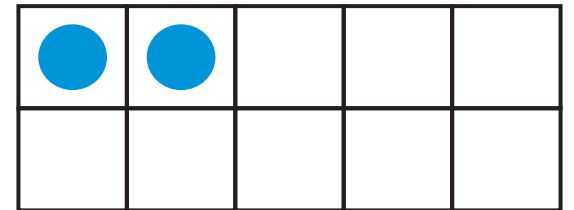

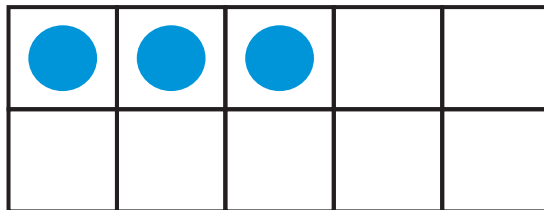

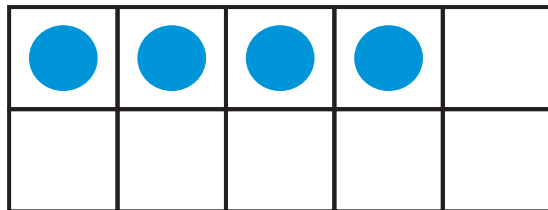

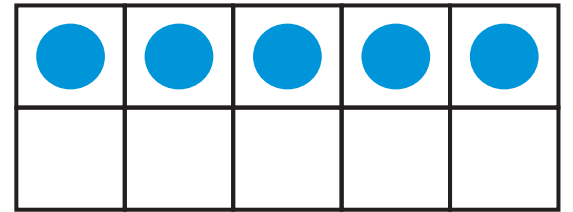

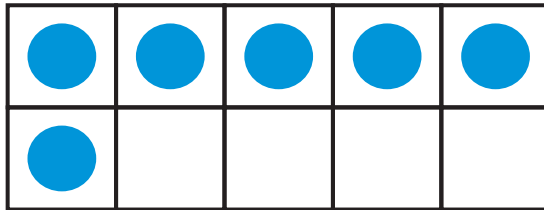

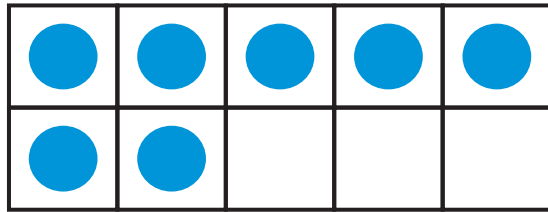

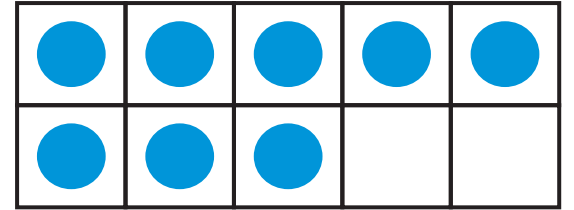

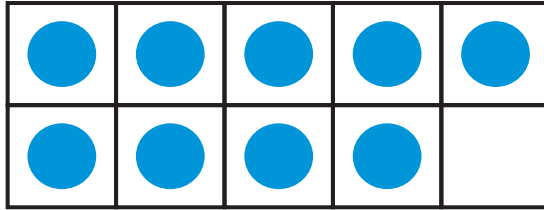

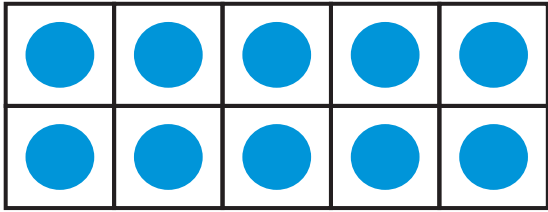

There are three color-coded games included in this download. All are practicing the same skill. The color-coded cards only aid in organization. You could also copy a set of cards on different colors of construction paper instead of printing in color in order to keep the sets organized.

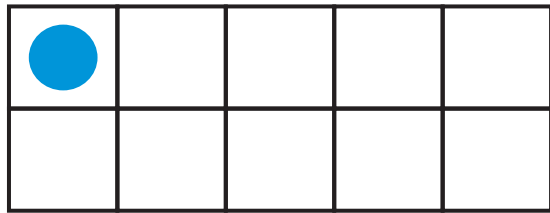

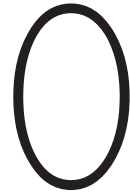

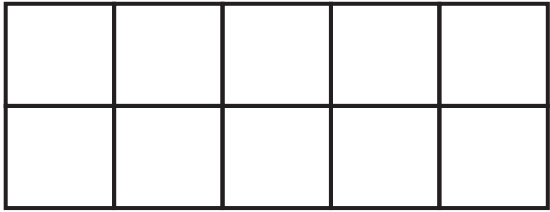

1. Print one copy of pages 4-9 onto cardstock paper. Cardstock is used so students cannot see through to the other side while playing the memory game.
2. Print page 10 three times onto cardstock paper.
3. Cut cards and put one set of ten frame cards along with the numerals into a bag.

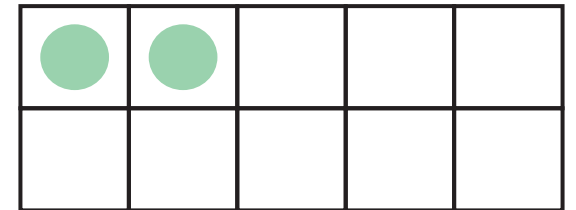

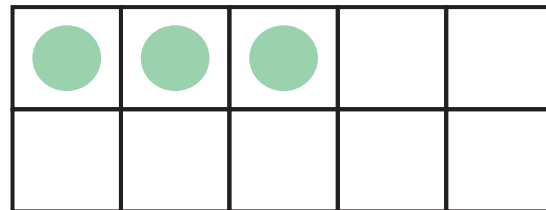

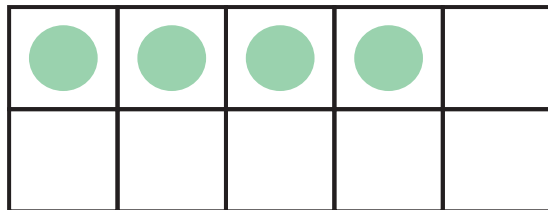

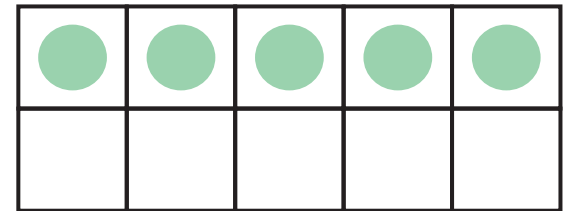

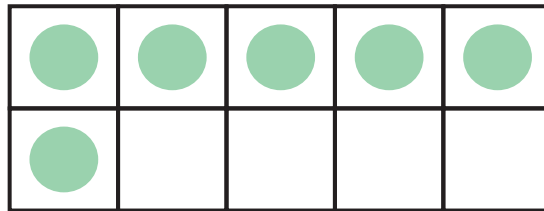

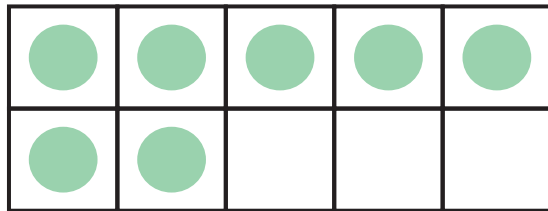

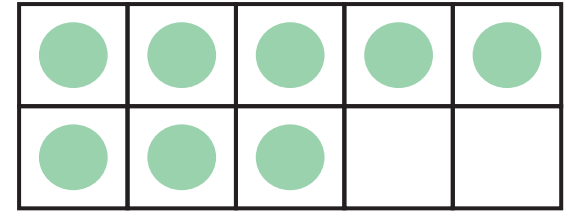

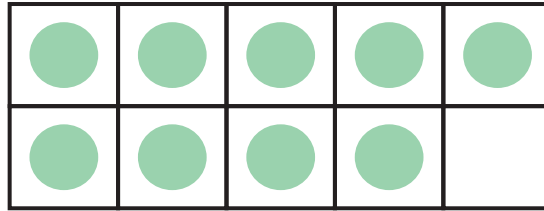

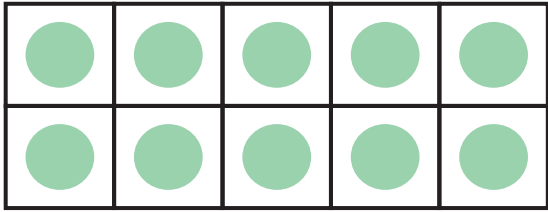

When students master visualizing 0-10, make the memory sets for
